

PITH AND POINT.

"The rambling old farm-house" is not confined to the East since the West began to enjoy a monopoly of cyclones. —*Burlington Free Press.*

"Pa," said a young hopeful, "I know what a man who has seen better days is. Well, my son, what is he?" "He is a man who makes you feel talking about himself." —*N. O. Bee.*

"What's the perbation, Jimmie?" "A ragged street urchin to another. 'Doncher know?' was the response. 'Naw.' 'Well, perbation's when a fellow's g'tin' square wid himself.' —*Boston Post.*

It is awfully exasperating to the man who doesn't like the way in which a big newspaper is run to send a vigorous protest and then see the big newspaper keep right on running in the way he doesn't like. —*Cambridge Chronicle.*

Marblehead (Mass.) young women have got up a nice kind of a party, where the young men in attendance are required to see around the bottom of an apron. The young women give 'em needles, but no other points. —*Boston Globe.*

A Nice Man to Handle Morphine: Druggists: "Perhaps with a little ingenuity we can fix up that broken show case, so that no one will know the difference." Clerk: "Ingenuity! What's that? Some of that new sticking-stuff we got yesterday?" —*N. Y. Times.*

"Now, who could tell me something about Solomon?" asked a Cedar street Sunday-school teacher while reviewing her class upon the illustrious Biblical characters. "He runs a cigar store on Main street," promptly responded a small boy whose acquaintance with Buffalo surpassed his knowledge of Jerusalem. —*Buffalo Courier.*

Little Johnny: "Pa, did you read in the paper how a parent was fined twenty-five dollars because his little boy hung on a street car?" "Well, what of it?" asked Colonel Fizzlepop. "Oh, nuthin', except I thought maybe you wanted to give me some nickels to buy car tickets. When I have car tickets I don't swing on the street cars." —*Texas Siftings.*

He and she:

He sat and twisted his blonde mustache; She toyed with a straying curl; And silently they gazed at each other, And he of his other girl.

At last:

She stood with her head on his shoulder; He toyed with the straying curl; She had no thought of her other beau, Nor he of his other girl.

That was a sweet reply of the little girl found busying at the ironing-table, smoothing the towels and stockings. "Isn't that the way to work?" "Yes, the way to work," she said, "but I don't like to look like a sun-burnt face when I come to school." "Well, you can't help that," he said, "but I don't like to look like a sun-burnt face when I come to school." —*Buffalo Courier.*

The Donkey's New Departure: A Donkey who was tired of Drawing his Master's Cart about went to the Cow for Advice, saying: "You have nothing to do all day long, while I work like a Slave. Tell me how I can escape this Drudgery." "All you have to do is to run away and Smash the Cart," replied the Cow. The Donkey determined to follow the Advice, and next morning when he set out to the Forest with the Cart after Faggots he suddenly Kicked up his heels and started off on a gallop. "Oh!" exclaimed the Peasant as he put on the whip; "I see what the Trouble is with you! I am Feeding you Too Many Oats. Hereafter your rations will be Reduced one-half." Moral: There is such a thing as being too Smart. —*Detroit Free Press.*

A TIMELY RIDE.

The Part Played by a Lame Boy in the Revolutionary Struggle.

It may seem at first that the boy mentioned in this incident, which is given by Edward Everett Hale in his "Boy Heroes," did nothing either heroic or remarkable, but it is a good illustration of the value of doing one's very best under all circumstances.

There was a boy whom I will name Luke Varnum. He was fifteen years old, and he was lame of his left foot. So, when every boy in the town of Newbury, and every man, old and young, shouldered his firelock and marched off to join General Stark, and go and fight the Hessians at Bennington, Luke was left at home. He limped out and held the stirrup for his father, and when the men had been to stay at home with the babies and the women. The men had been gone an hour and a half, when three men galloped up on horseback. And Luke went down to the rails to see who they were. "Is there nobody here?" said one of them. "Yes," said Luke, "I am here." "I see that," said the first man laughing. "What I mean is, is there nobody here can save a shot?" "I can," said Luke. "I often tend fire for Jonas. I can blow the bellows, and I can hold a horse's foot. Any way, I will start up the fire." Luke went into the forge and took down the tinder-box, and struck a light. He built the fire, and hunted up half a dozen nails which Jonas had left unintentionally, and he had even made two more, when a fourth horseman came slowly down on a white horse. "What luck?" said he, "to find a forge with the fire lighted?" "We found one," said Marvin. "With a boy who knew how to light it." The other speaker flung himself on the horse and rode. "I have heard of the dainty creature, and measured the shoe, which was too big for her. He heated it white, and bent it closer, to the proper size." "It is a poor fit," he said, "but it will do." "It will do very well," said his rider. "But she is very tender-footed, and I do not dare trust her five miles unshod." For pride's sake, the first two nails Luke drove were the first he had made himself. "Tell Jonas that I hot up the forge—and put on the shoe." "We will tell him," said the Colonel, laughing, and he rode on. But one of the other horsemen tarried a minute, and said: "Boy, no ten men who left you to-day have served your country as you have. It is Colonel Warner. When I read in history how Colonel Warner led in history how Colonel Warner saved the day at Bennington, I am apt to think of Luke Varnum. When I read that that day decided the battle of Saratoga, and determined that America should be independent, I think of Luke Varnum. When I go to see monuments erected in memory of Colonel Warner and General Stark, and even poor old Burgoyne, I think of Luke Varnum and others like him. And then some me I wonder whether every man and boy of us who bravely and truly does the very best thing he knows how to do, does not have the future of the world resting on him." —*Fortune's Companion.*

YANKEE DOODLE.

Origin of the Most Popular and Oldest American Song.

In the "Centennial Collection of National Songs," published in 1876, the following account is given of the origin of "Yankee Doodle": "In the summer of 1775 the British army, under command of General Abercrombie, lay encamped on the east bank of the Hudson river, a little south of the city of Albany, awaiting reinforcements of militia from the Eastern States previous to marching upon Ticonderoga. During the month of March these raw lions poured into camp company after company, each man differently armed, equipped and accoutered from his neighbors, the whole presenting such an appearance as never equaled unless by the celebrated army of Jack Falstaff. Their appearance furnished great amusement to the British officers. One Dr. Shamburg, an English surgeon, composed the tune of 'Yankee Doodle,' and arranged to words, which were gravely dedicated to the new recruits. The original words which were taken from 'Farmer and Moore's Historical Collections,' published in 1820, we have not, however, met with before in many years."

With the needful historical corrections that the attack on Ticonderoga by Abercrombie took place in 1758, and not 1775, and that Dr. Shamburg did not compose the tune of "Yankee Doodle," the above as quoted is generally correct. Another authority states that the song originally appeared in a Boston newspaper in 1775, under the title of "The Yankee's Return from Camp." This version of the song appears in the Historical Collections of New Hampshire. The first verse and chorus of this version are as follows:

Father and I went down to camp,
Yankee Doodle, did we,
Mind the music and the step,
And with the girls be handy,
As thick as hasty pudding.

There are fifteen additional verses in this version of the song. There is a mistake somewhere, for "Yankee Doodle," in both words and music, has a lineage that dates farther back than either 1775 or 1758. In an old newspaper, the *Columbian Gazette*, published at Georgetown, D. C., during the early years of this century, appears a song from a correspondent telling of his having seen, in the collection of a gentleman in Cheltenham, England, called "Musical Antiquities of England," a song entitled "Yankee Doodle," one verse of which ran as follows:

Nankee Doodle came to town,
With a feather in his hat,
And a Macaroni on his side,
He was a dandy, and he was a dandy.

The song was written after the restoration of Charles II., and the verse given is a satirical allusion to Cromwell's going to Oxford, on a small horse, with his single plume fastened to his hat by a small knot called a "Macaroni."

Watson, in his "Annals of Philadelphia," says that John Carr, who opened the first theatre in Baltimore, in 1807, had a book of tunes, one called an "Air from Clydes," an English opera, written for Lincoln's Inn Fields Theatre, London, about 1731, by John Christian Smith, which had the air of "Yankee Doodle." Watson gives us the first verse of the original American song:

Yankee Doodle keep it up,
Do it neat and handy,
The boys to the right hand troops,
We'll crush the old Yankee Doodle.

Clearly all patriotic Americans should feel proud of "Yankee Doodle." Written originally to satirize the dead Protector Oliver Cromwell, by some friend of the newly-reformed Stuart, Charles II., it has become a song of the greatest dramatic success of the age; a second time it appeared in opera, and then crossed the Atlantic, where it at once became a favorite. Although used by many popular actors as a model of acting, the recruits in the army, in less than fifty years the song was used by the descendants of those recruits as a battle cry when chasing the British out of the United States. The song of "Yankee Doodle" truly represents the spirit of the Nation, and long may it live.

Yankee Doodle keep it up,
Do it neat and handy,
Whatever he undertakes, — Will M. Clemens, in *Chicago Current.*

ELEMENTS OF A MAN.

How a Human Being Appears from a Chemist's Point of View.

It depends, of course, on how one looks at a man. That was the reflection of a reporter, as he stood before a case forming a part of the exhibits in the section of foods at the National Museum. The contents of the case showed one what a 145-pound man appears like from the chemist's point of view. In other words, a supposititious man five feet eight inches high, weighing 154 pounds, had been passed through the chemist's laboratory and divided into his ultimate elements. There stood all these elements and chemical compounds in glass jars, properly labeled. All of the man was there except the substance of life, which in some way escapes before the chemist can get it cooped up in a jar and labeled. Hence, as it is important element is lacking, it is difficult, so the chemist admitted to the reporter, to make a man that would amount to anything out of the contents of these jars. The case of exhibits forms a sort of a series, being prepared under the direction of Mr. Reynold Hitchcock, curator of the section, and which, when complete, will

SCOURS IN LIVE STOCK.

Treatment of Diarrhea and Dysentery in Cattle, Horses and Sheep.

The most prevalent disorder of the summer months among live-stock is scours, commonly called scours. This trouble affects cows, calves, sheep and lambs, and is usually misdirected under the mistaken apprehension that a too laxative condition of the bowels calls for astringent medicines. Hence popular remedies, such as alum, copra and oak bark, are usually given, not only without good results, but often mischievously and gradually irritating the mucous membranes so much that fatal dysentery occurs and the animals perish miserably. Young creatures often suffer in this way for the mistakes of their owners, and the heat of the summer to which the animals are exposed, with the want of water, aggravate the disease and make it rapidly fatal.

Diarrhea is an indication that the intestinal canal is suffering from the presence in it of irritating and indigestible matter. There are other causes of this disease, as inflammation induced by cold or the results of impure water; but improper feeding, or the indigestion of the food, are the most frequent causes. It is obvious then that the use of any astringent medicine would have a great opposite effect. The process, as it were, they would tend to retain in the bowels the injurious matter which nature is exerting all its power to eject. It is equally true that all astringent and stimulating drugs, such as opium, alcohol, cayenne, pepper and others, often given in cases of diarrhea, are, at the best, only questionable, and may be positively dangerous as increasing the irritation and inflammation of the already diseased organs and so only adding, as it were, fuel to the fire.

In most cases the treatment should be gentle and palliative. Raw linseed oil, in doses of one ounce for each one hundred pounds in live weight, is the most useful medicine. It soothes the tender and inflamed stomach and bowels, and gently ejects the offending matter. It is not drastic in its action, but gently laxative and soothing. A great deal may be done in feeding linseed, or oat-meal gruel, slippery elm bark infusions, and any other gummy and mucilaginous liquid food are useful; if any tonic is thought proper, a dram of ground ginger to the quart of liquid and a subal quantity of sugar or molasses will be beneficial. Food and excess of water are to be withheld, and pure water as cold as can be procured is desirable. In bad cases, ice water in small quantities at a time has a good effect. After the laxative has operated, the following mixture may be used, viz.: One ounce of laudanum, one ounce of tincture of rhubarb, two ounces of essence of peppermint, one ounce of prepared chalk to a pint of liquid, all well shaken in a bottle. Of this mixture, a teaspoonful may be given to a lamb and to a calf every hour. Half the above quantity may be given to a cow or a horse, but smaller doses frequently repeated are preferable. —*American Agriculturist.*

HOOKS AND EYES.

The Ingenious Machines Used in Their Manufacture.

For more than a dozen years the manufacture of hooks and eyes for women's and children's dresses may be said to have been dead, but having superseded them. But there are indications that hooks and eyes are again to come into use, at least to a considerable extent. This should prove to be the case, if it will gladden the hearts of those who have preserved their machinery from the scrap heap. Thirty years ago the State of Connecticut had manufacturing within her territory that produced these little articles to the value of \$12,000 annually at fifteen cents a gross. Previous to 1890, of these hooks and eyes were made by hand and sold at \$1.50 per gross. The machines for making hooks and eyes are quite ingenious, those for the hooks being capable of making ninety per minute and those for the eyes one hundred and twenty per minute. That for making the hooks takes the wire from a reel through a straightener, cuts off the wire to the exact length, when a blade strikes the point in the middle of its length, and two side blades moving simultaneously bend the wire double, laying the two halves of its length close together and parallel. These two pins rise, one on each side of the wire, to form the eyes of the hook, and two semi-rotating pushers bend the ends round the pins, making the eyelets for sewing the hook on to the fabric. The unfinished hook is still capable of similar ninety per minute, and those for the eyes one hundred and twenty per minute. That for making the hooks takes the wire from a reel through a straightener, cuts off the wire to the exact length, when a blade strikes the point in the middle of its length, and two side blades moving simultaneously bend the wire double, laying the two halves of its length close together and parallel. That for making the hooks takes the wire from a reel through a straightener, cuts off the wire to the exact length, when a blade strikes the point in the middle of its length, and two side blades moving simultaneously bend the wire double, laying the two halves of its length close together and parallel. These two pins rise, one on each side of the wire, to form the eyes of the hook, and two semi-rotating pushers bend the ends round the pins, making the eyelets for sewing the hook on to the fabric. The unfinished hook is still capable of similar ninety per minute, and those for the eyes one hundred and twenty per minute. That for making the hooks takes the wire from a reel through a straightener, cuts off the wire to the exact length, when a blade strikes the point in the middle of its length, and two side blades moving simultaneously bend the wire double, laying the two halves of its length close together and parallel. These two pins rise, one on each side of the wire, to form the eyes of the hook, and two semi-rotating pushers bend the ends round the pins, making the eyelets for sewing the hook on to the fabric. The unfinished hook is still capable of similar ninety per minute, and those for the eyes one hundred and twenty per minute. That for making the hooks takes the wire from a reel through a straightener, cuts off the wire to the exact length, when a blade strikes the point in the middle of its length, and two side blades moving simultaneously bend the wire double, laying the two halves of its length close together and parallel. These two pins rise, one on each side of the wire, to form the eyes of the hook, and two semi-rotating pushers bend the ends round the pins, making the eyelets for sewing the hook on to the fabric.
